

# SPARKLE MAGIC

## POLISHING POWDER

**STONE-GLO**  
PRODUCTS

**THE MARBLE EXPERTS**

### Features & Benefits

- High Gloss
- Non-Etching
- Non-Hazardous

### Directions for Use:

1. Strip and remove any floor finish and sealer using a wet vac to pick up the residue. Rinsing is not required. To prepare the floor surface for Sparkle Magic wet scrub with pre-selected screen disc or diamond pads. Best results are achieved if polishing compound is used after an 800 grit diamond or screen.
2. Carefully pour Sparkle Magic over a small area (approx. 3 sf). Use ¼ oz. per sq ft for area being polished.
3. Mix with a small amount of water (approx 8 oz/1 cup).
4. Using a slow speed machine (175 rpm) with a Stone-Glo Brush or Applicator Pad. Begin scrubbing in small counterclockwise circles.
5. Add more water as necessary so that you maintain a light bodied semi pasty solution. Do Not allow Sparkle Magic to dry on the floor. Continue slowly scrubbing in small circles moving from side to side until desired shine is achieved.

STONE-GLO SPARKLE MAGIC will bring your marble and terrazzo floors new life and luster; faded floors will become deep and vivid as when they were new. STONE-GLO SPARKLE MAGIC polishing powder works by chemically breaking the bond of ground-in-soil and dulling films, while at the same time polishing the surface of your terrazzo or marble floors to a fine lustrous wet look without acids. Ideal for reviving dull marble, marble agglomerates, and terrazzo floors, vanities, tabletops, countertops, and walls. A special additive of abrasives puts this powder a step ahead of all other marble polishing compounds. It will remove traffic patterns, scratches, abrasions, etch marks, and even some surface stains. For use on Marble, Terrazzo, Epoxy Terrazzo, Travertine and Slate.

STONE-GLO manufactures a full line of stone care products. Call one of our experts to schedule a demonstration or for any stone care questions you might have.
